LED Tail Lights

KNS Accessories is proud to introduce an LED version of an iconic tail light. This version has never been offered before due to the dual colors of amber and red in the same lens. We have developed a unique circuit board that when brakes are applied, the "STOP" script illuminates in amber. The new tail light features a lens that is brighter and therefore safer for any Model A, street rod, pickups, trailers, motorcycles, and many other custom applications while maintaining its original and timeless appearance. The unique lens comes ready to install with an 1156 plug and serves as a stop, turn and running tail light where the red portion stays lit at all times. When the brake is applied, the "STOP" script illuminates in amber. As a turn signal, all lights turn on in a high and low output sequence. The complete assembly is offered in all black or stainless steel housing and the left side will feature a white led lens for license plate lighting. This unit will easily replace your existing tail light and will fit into any existing bracket or fender.

Applications Model A, street rods, bobbers, trailers, and custom applications

Function Tail light assembly

Material Steel metal housing with polycarbonate led lens

Unit & Package Sold by each, color display box

Part No	Description

LED Tail Lights

Pictures do not do this tail light justice. This all red LED lens looks like glass when illuminated and the red LED diodes are much brighter than original and therefore safer. The lens is waterproof sealed and made from high quality polycarbonate materials. This unit will easily replace your existing tail light and will fit into any existing bracket or fender.

Applications Model A, street rods, bobbers, trailers, and custom applications

Tail Lights

A top quality reproduction of the iconic Model A tail light. This features the OEM "DUOLAMP" stamping with red glass lens and the word "STOP" script in amber. Available for both 6 and 12 volt applications. The bottom lens illuminates for running and turn signal. The top "STOP" lens illuminates when braking. A very popular tail light that is also used on my street rod and custom applications such as trailers, motorcycles, trucks and of course, hot rods.

Applications Model A, street rods, bobbers, trailers, and custom applications

Tail Light Bracket

KNS tail light brackets are available in steel chrome or powdercoated semi gloss black. These mount to the rear fender and hold the tail light and license plate bracket if needed. The shaft allows to hide any visible wiring and will make your tail light stick out approx 5 3/8" away from the fender. These are a top quality stamped steel reproduction and also used on many makes and models such as vintage trailers, street rods, and trucks.
